All product shots are artistic interpretations of actual product. Due to the nature of the printing process, we recommend obtaining physical samples of product for actual color representation.

Please note that glass mosaic tiles are mounted on the front side with brown paper so that the backside of the glass can be adhered onto the surface directly for best bond application. The back side of glass is full color body and does not contain any finishes such as iridescent, matte, or textured. The appearance of full-size sheets of tile may differ from samples due to the nature of the brown paper face.

Once applied to the substrate the true color will appear more closely matching the samples.

Visit JeffreyCourt.com/Pool for installation instructions and application details.
